

Frontend Group 2: Portfolio website

Team members:

Tripti Nayak

Shaun Figueiro

Sheneal butello

Samuel Robert

Problem Statement: Create a Basic Template for Portfolio Website using React framework along with three.js library. Website should have unique way of displaying one's portfolio along with having professional guidelines. It shouldn't be having too much content, but still message should be clear. Themes should be added as well.

Proposed model: The portfolio website would include the following sections:

1. About
2. Contact
3. Project
4. Description

Technologies used: HTML, CSS, JavaScript, React JS

Timeline:

- We'll be learning about JavaScript and React JS in the first few weeks.
- Next, we'll be having meetings and decide about the template and theme.
- Then we'll be dividing the roles among the members and start the work.
