

KubixSquare July Internship

Frontend Group 2: Portfolio website

Team members:

Tripti Nayak

Shaun Figueiro

Sheneal butello

Samuel Robert

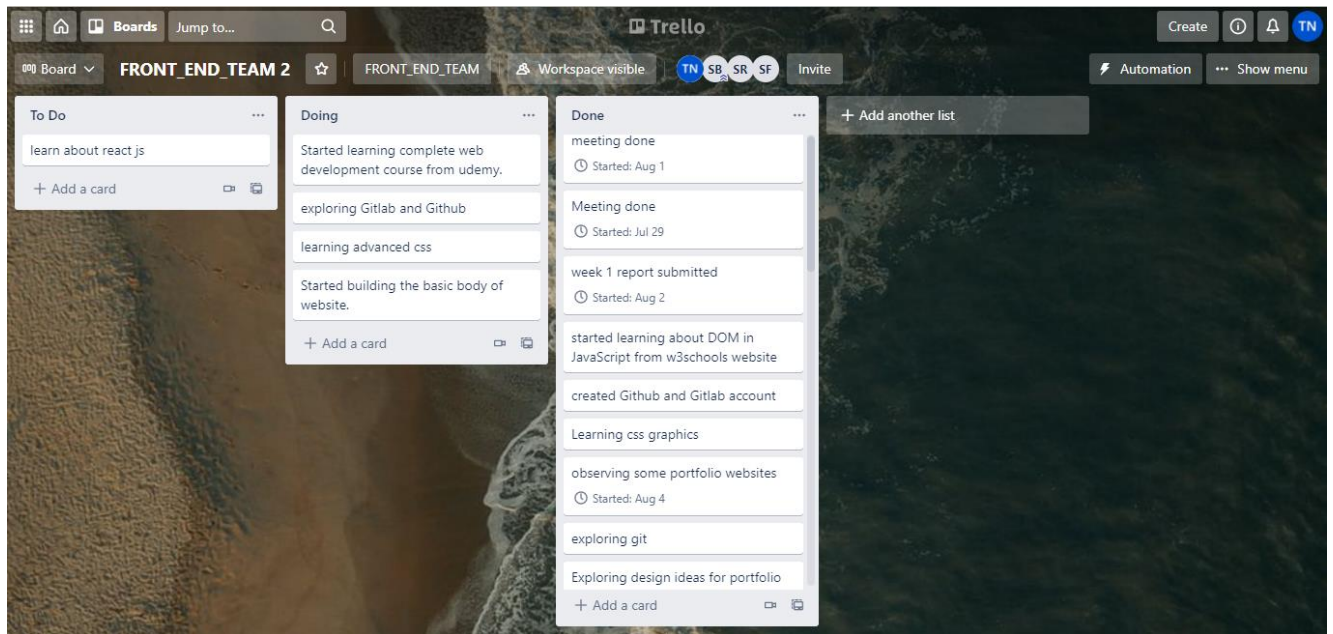

Problem Statement: Create a Basic Template for Portfolio Website using React framework along with three.js library. Website should have unique way of displaying one's portfolio along with having professional guidelines. It shouldn't be having too much content, but still message should be clear. Themes should be added as well.

Final Report :

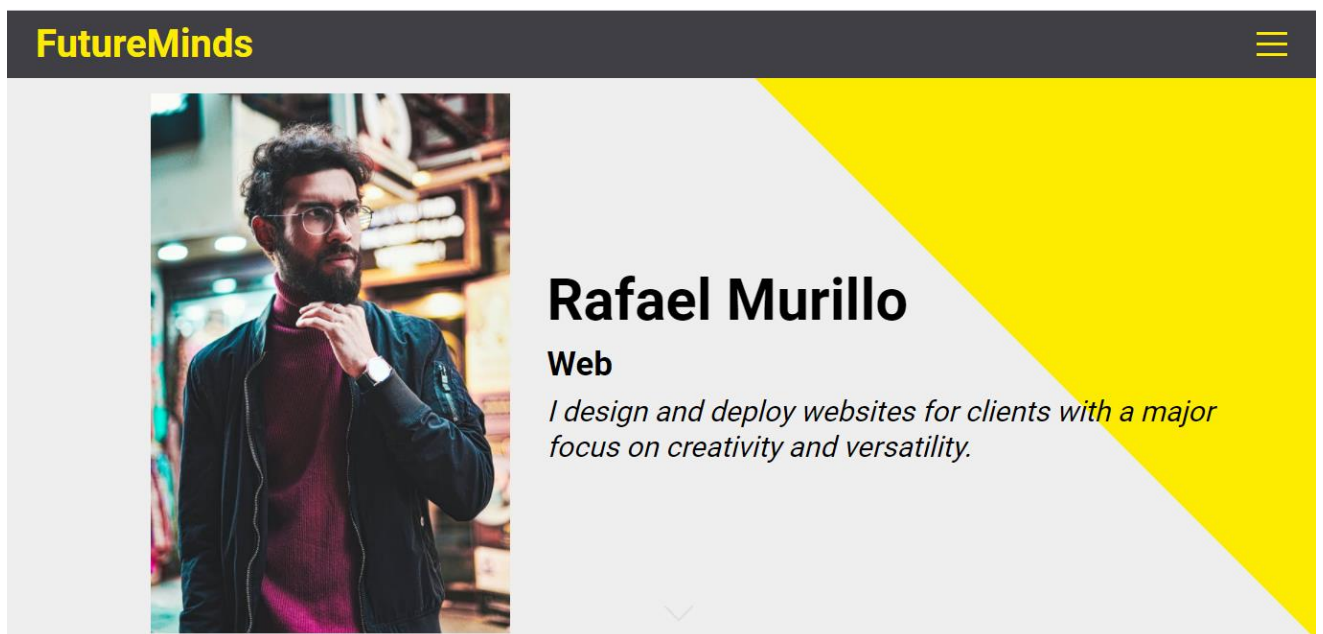

1. First we started learning JavaScript concepts which would be useful for understanding React.
2. We also learnt advanced HTML and CSS including concepts like flexbox, grids and animations.
3. We started exploring GitLab and created our respective accounts.
4. After learning the basics we started learning react from various sources including W3 schools and Udemy.
5. We also learnt about Three.JS
6. Then we created a basic template on how our website would look once ready.
7. We also searched for assets we would put in the website including images and illustrations.
8. We finally had a meeting and divided the components like intro, contact, testimonials, portfolio and skills among the members.
9. After finishing the individual coding we combined it and made the necessary changes to create a final website.
10. The project is uploaded on GitHub and Trello board has been updated accordingly.

Testimonials

Very helpful when building my website, I now have my ecommerce store built from scratch.

Tom Durden
Senior Developer

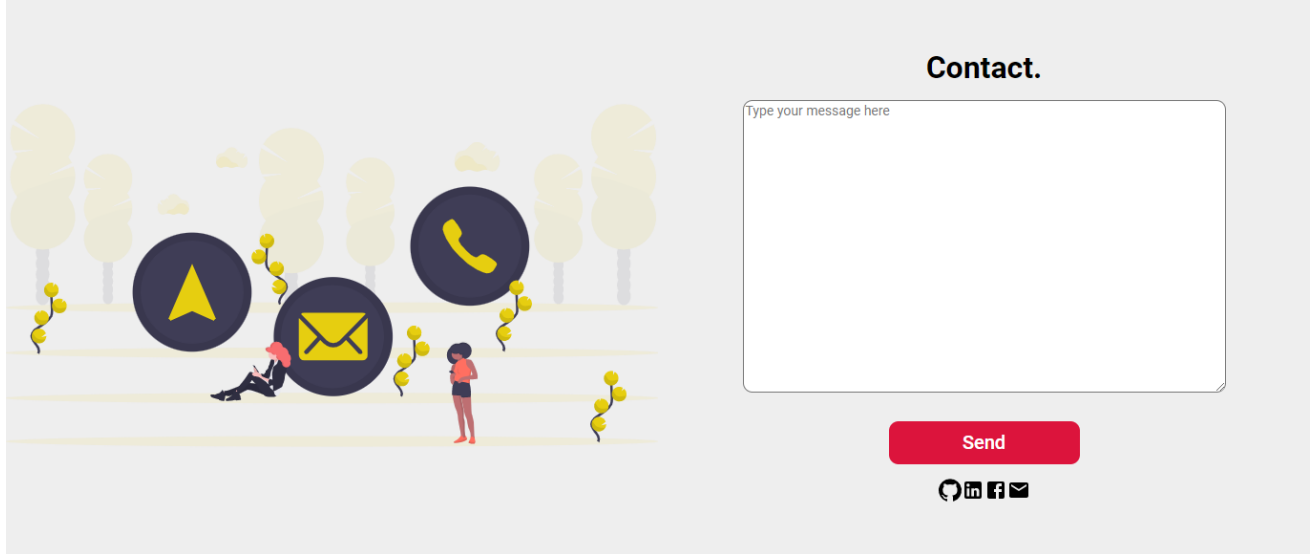

Without doubt one of the most talented programmers out there. I always go back to Rafael when I'm out of my depth and he's never failed to deliver what I ask for. Smart, trustworthy and professional. You won't be disappointed.

Alex Kalinski
Co-Founder of Detla

Fantastic service and great guy. We recommend to anyone who needs a website or web services. Well be using for any further web based services we require!

Martin Harold
Asst. Manager at ALLANA
