

Frontend Group 2: Portfolio website

Team members:

Tripti Nayak

Shaun Figueiro

Sheneal butello

Samuel Robert

Problem Statement: Create a Basic Template for Portfolio Website using React framework along with three.js library. Website should have unique way of displaying one's portfolio along with having professional guidelines. It shouldn't be having too much content, but still message should be clear. Themes should be added as well.

Agenda:

- Started learning React JS.
- Had meetings to plan the roadmap to creating the project.
- Looked into more portfolio design examples.
- Did basic setup for React including the different components.
